課程簡介 Course Description	
<p>This course provides a general introduction to the scientific study of language and helps students to establish a broad view on world languages and the similarities and differences across languages. Students will explore different aspects of human language and how language operates through linguistic observation, analyses of language data, discussion of linguistic problems, group project, and other class activities. With a better understanding of the nature of language, students are expected to become more objective in dealing with human communications. Topics covered in the first semester include the nature of human language, language and the brain, morphology (language and words), syntax (language and structure), semantics (language and meaning), pragmatics (language and use), phonetics (language and sounds), and phonology (language and sound system).</p>
